Test Plan - Yoodemizers

Created by Jason Pritchard
Last updated Feb 25, 2019

Summary

Version	Version 2.13.19	
Status	<div>COMPLETE</div>	
Overview	Launching a peer to peer rental platform in Spring 2019.	
Requirements	Requirements are referenced in the "Supporting Info Section" below. The requirements consist of what the user, owner, and renter should be able to interact with Yoodlize app. There are tables created for the user, owner, and renter that consists of all requirements listed.	
Application	https://alpha.yoodlize.com/	
Link to Test Suites in JIRA	https://dmutah.atlassian.net/secure/RapidBoard.jspa?rapidView=178&modal=detail&selectedIssue=TY-3	
Stakeholder(s)		
	Hannah Nielson	hniel08@gmail.com (Android)
	Donnie Kim	dk.personal1445@gmail.com (Android)
	Jason Pritchard	Equa1ityPe4ce@gmail.com (Android)

Approach / Strategy

Begin with testing user/owner/renter accounts. Then inventory addition management. Search and filters. Basic payment and renting. Messaging. History and advertisements. While testing against these functions reporting user experience suggestions to

Selecting item	Does selecting an item redirect to item page Does selecting an item show its description	<div>  TY-29 - RENTER - Clicking Item Goes To Item Page DONE </div>	PASS
Browse categories	Does browsing by categories redirect to a search page with categories set as filters	<div>  TY-35 - RENTER - Use Browse Categories From The Bottom DONE </div>	PASS

Feature	Test Criteria	Test Case(s)	Testing Status
Admin section	Should include <ul style="list-style-type: none"> manage products listed items requested Payment info/instructions View transaction history Edit profile Dashboard with rental reminders Message box 	 TY-9 - Owner - Admin Section contains... DONE	PASS
Reviews renter after dropoff as appropriate		 TY-10 - Owner - Review Renter after dropoff TO DO	BLOCKED
Deny requests for rental		 TY-12 - Owner - Deny Rental Requests IN REVIEW	FAIL
View transaction history		 TY-13 - Owner - View transaction history TO DO	BLOCKED
Manage products listed		 TY-16 - Owner - Filter listings IN REVIEW	FAIL

Feature	Test Criteria	Test Case(s)	Testing Status
Search screen	Does search page have: <ul style="list-style-type: none"> Filters Minimum/maximum price range Ratings Can map show items for rent	 TY-19 - Renter - Search From Anywhere IN REVIEW  TY-37 - RENTER - Search By Map TO DO	PASS
Request items to rent	Can you pick which days you will need your requested item Can you enter payment information	 TY-39 - RENTER - Requesting Rental TO DO	PASS
Payment information request	When you are renting an item does it allow you in enter a payment method	 TY-42 - RENTER - Payment Info Request TO DO	PASS
Payment not billed until pick up	When picking up an item does the payment go through in the mobile app	 TY-44 - RENTER - Payment Not Billed Until Pick-up OPEN	BLOCKED

Feature	Test Criteria	Test Case(s)	Testing Status
See Items requested		 TY-103 - Owner - See Items Requested in Reservation IN PROGRESS	FAIL
Dashboard with rental reminders		 TY-17 - Owner - Dashboard rental reminders TO DO	BLOCKED
Access Renter's Info		 TY-24 - Owner - Able to access Renter's info IN REVIEW	PASS

Feature	Test Criteria	Test Case(s)	Testing Status
Rental reminders on dashboard	Does the dashboard remind you when you have a to pick-up and drop-off rental	 TY-117 - JIRA project doesn't exist or you don't have permission to view it.	PASS
View transaction history	Can you view your transaction history	 TY-118 - View Transaction History OPEN	BLOCKED
Rating and reviews	Can you leave ratings and reviews after drop-off of a rental item	 TY-119 - Posting Reviews and Ratings As A Renter OPEN	BLOCKED
Hovering over item displays brief description of item	Does hovering over an item show a brief description of it	 TY-34 - RENTER - Mouse Over Item TO DO	COMPLETE

Risks

Risks:

Project Risk: No current Development for contested rentals.

I can think of many issues with contesting rentals could turn into a his word again my word scenario with many risks attached to this

Risk - Stolen property rented to not be in possession of stolen property but to still profit from it.

Owner to provide proof of ownership?

Risk Used in a crime then returned to owner or left at crime scene.

Yoodlize could be seen as an accessory

Schedule / Coordination

Testing Entry Criteria

- Donnie - Create test cases for renter and execute manually
- Jason - Create test cases for user and execute manually.
- Hannah - Create test cases for owner and execute manually

On Monday - come back together and discuss what to automate.

Testing Exit Criteria

- At least one test case has been written per each requirement
- Test cases have been tested manually 100%
- Record of bugs found have been recorded

Monitoring and Control

Make sure that there are test cases for every bullet point in the requirements

Function for feedback

Design/user experience :Defensible reasoning; No 2 way discussion available

Bug reporting procedure:

Screenshot

Circle in red

If bug lacks ID

Preface bug with "Needs ID"

Monitor that defect reports are addressed. Followed by 2 party verification on multiple platforms that defect has been resolved

Document

Percent of test cases that have been run.

Total number of devices tested with.

Number of bugs fixed.

Test Summary - User

Test Summary

QA Jason Pritchard designed and executed tests in the scope of User account creation. Based on requirements [Documentation](#). Outlined in [Test Plan](#). Some AD hoc tests were designed and executed at testers discretion due to lack of mention in documentation yet still necessary for the account creation process.

Features tested

Account creation with

- Google
- Facebook(blocked)
- E-mail

Adding Payout Method

- PayPal
- Bank Account(Blocked)

Editing Account

Verifying Email address

Clickable text, formatting and typos for all user screens relating to account creation and linking

Test Summary - Owner

In reviewing Yoodlize, several features did not meet requirements and failed and a couple of test cases are unable to be tested until some bugs are fixed.

Features that have been tested

- List product
- Message box
- Admin section
- Deny request for rental
- Manage products listed
- See items requested
- Access renter's info

Features that are unable to be tested at the moment due to some functions still need to be implemented and errors

- Payment when item is returned
- Review renter after dropoff
- View transaction history
- Dashboard with rental reminders

Here are current improvements needed for Yoodlize site:

List product

- Without having to fill out the "Trust and Verification" area, you can post things and all these other things. Really should be able to verify first
- Can add as many rules as you wish

Test Summary - Renter

Summary

I have found several issues with the web application as a renter. I have submitted bug reports that are currently being worked on at this time. I advise against the release of this product. More tests still need to be done as well as confirmation tests for the bugs that have been reported.

Objective:

- As a renter test to make sure that all functionality works as it should as per requirement specifications.
- Document functional and non-functional testing for web application on windows 10 and google chrome browser.
- Confirm bugs reported have been fixed
- Get product ready for release

Goals:

Functional testing for:

- Search by keyword
- Search by map
- Search by price range
- Search by rating
- Rental requesting
- Rental request through blocked dates
- Messaging
- Filtering

Requesting a rental while not logged in

Uploading documents and photos

Changing of passwords

NavLinks navigates user to stated page

Metrics:

81 executions out of 34 test cases

2 bugs reported, 2 bugs addressed, 6 confirmation tests executed. 2 bugs Fixed

Assessment of testing:

The account creation process still needs work, many changes have been made can confirmation and regression is underway. As more defects are addressed more testing will be required before product is launched. Regarding Mobile devices android and iOS. Environments were unstable and unreliable. Getting consistent or measurable data was not achievable. Therefore only exploratory tests were executed and bugs reported.

Account creation and linking functions still blocked reported and to be addressed.

- Linking bank account
- Creating account with Facebook
- Validating email

- Can add as many of the same rules as you wish
- Cannot see see days blocked for item

Message box

- Owner cannot see recent response from Renter
- Cannot delete your messages
- Hard to tell which messages you have responded to
- Sometimes you do not see the message but you will get an email saying that you got a message

Deny request for rental

- Item can be declined, but it is still booked in the reservation tab

Manage products listed

- Listing is not showing all items created

See items requested

- Cannot look at reservations and see which items are requested

Unable to test with mobile app

- Several functions are not working with the mobile app. It cannot be tested sufficiently because the app keeps giving a black screen of death. Will start testing once the mobile app is more functional

Metrics:

Bugs reported - 42

Bugs fixed - 20

Total test cases - 14

Tests blocked - 7

Tests failed - 6

- Mousing/Hovering over items
- Payment information request
- Categories
- Item selection
- Your reservations

Non-functional testing for:

- Search by keyword
- Search by map
- Search by filter
- Search by category
- Rental requesting
- Messaging

Outcome:

- Product is not ready for production
- Several issues have been noted while testing this product and are being worked on by development

Not yet tested due to functions in development:

- Payment not billed until pick-up
- Transaction history
- Reviews and ratings

Metrics:

Total test -

Total executed -

Total executed tests passed -

total executed tests failed -

Total unexecuted -

Bugs reported - 15

Test cases made - 13

Tests passed - 1

There is at least one test case for each requirement.

Assessment of testing:

Webapp needs a bit more work, mobile app is not at the point where it can be tested. The developer is awesome and really knows his stuff and on top of things, so there's a lot of progress. The blocked functions should be able to tested once payment, reservations, and rental reminders are functional.

 Unlike You and [Hannah Nielson](#) like this
